

**1. 1 day old dental pad lesion**

**Sheep's mouth with two small unruptured vesicles on the dental pad of 1 day duration.**

**Note the blanched, glistening appearance of the lesions.**

**2. 2 day old pad and gum lesion**

**Two-day old lesion on the dental pad and upper gum of the sheep. The margins of the lesion are sharp.**

**3. 2 day old tongue lesion**

**Further examples of 2 day old sheep's lesions, this time on the tongue.**

**4. 2 day old pad lesion**

**A day 2 lesion on the dental pad of a sheep.**

With acknowledgements to MAFF and Peter Russell of Royal Veterinary College, London

**5. 3 day old pad lesion**

The same sheep as in picture 4, one day later.

Note rapid loss of edge definition of the lesion.

**6. 12 day old tongue lesion**

Sheep's tongue with two 12 day-old lesions only discernible by loss of papillae and indentation of tongue surface.

**7. 1 day old foot lesion**

Sheep foot with 1 day old unruptured vesicle along coronary band.

Note necessity to turn back the hair to see the lesion.

**8. 2 day old interdigital space foot lesion**

Two day old lesions in the interdigital space and along the coronary band of a sheep's foot.

Note blanching and swelling.

**9. 2 day old foot lesion**

**Sheep's foot with coronary band vesicle of two days of age, one of which has ruptured.**

**10. 2 day old food lesion**

**Sheep's foot with two day old coronary band lesion.**

**Note the necessity to turn back hair to see the lesion.**

**11. 3 day old foot lesion**

**Same foot as in figure 10, one day later i.e. with 3 day old lesion.**

**Note sero-fibrinous exudate and swelling.**

**12. 4 day old foot lesion**

**A four day old coronary band lesion on a sheep's foot. Swelling has decreased and signs of healing are evident.**

**13. 6 day old foot lesion**

**A six day old lesion on the coronary band of a sheep's foot. Note scab formation and rapid healing.**

**14. 10 day old foot lesion**

**A sheep's foot with a 10 day old healed coronary band lesion. Note under-running of horn tissue.**

**15. Mouth lesions in the goat**

**Goat with two day old lesions on tongue and upper and lower lips.**

**16. Foot lesions in the goat**

**Goat's foot with one day old unruptured coronary band vesicle.**

**Note: goat foot and mouth vesicles are less pronounced than in sheep and heal more quickly.**
